

MURALPLAST SUPER-FLEX

Elastomeric Waterproof Coating for Roofs and Walls
Stays Flexible and Waterproof for Years

 Muralplast

MURALPLAST SUPER-FLEX

Prevents and Cures Leaks
In All Types of Roofs,
Gutters and Walls

Muralplast Super-Flex is a flexible, elastomeric coating which forms a seamless waterproof membrane to economically prevent or cure leaks in roofs, gutters and walls. Water-based and free from toxic hazards, Super-Flex remains flexible and elastic over many years, allowing for movement in the substrate. In this way it forms a long-life, durable protective coating for weatherproofing roofs and walls. In addition to curing leaks, the coating helps to reduce maintenance costs.

Super-Flex is suitable for application to almost any surface including roof tiles, slate, brick, concrete, corrugated iron, asbestos, asphalt, felt, copper, zinc, most plastics and timber after suitable preparation.

Easily and quickly applied by brush, roller or spray, Super-Flex comes ready for use without pre-heating or mixing and is normally dry in approximately 4 to 6 hours. It is available in:

Black

Dark Green

Battleship Grey

Light Grey

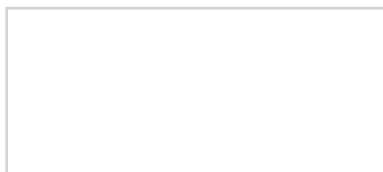

Tile Red

Solar Reflective Colours

Silver

White

Felt

Slate/Roof Tiles

Clay Tiles

Concrete

Corrugated Iron

Asphalt Roof

Timber

Asbestos

Copper/Lead/Zinc
