PROTECT AND PRESERVE

M-Guard The weatherproofing treatment
with the **10 year guarantee***

* AXA Insurance backed

M-Guard

M-Guard Provides Total Weather Protection

Without changing the building's appearance

No matter how well constructed, all buildings eventually succumb to the ravages of natural forces. Freeze-thaw cycling, wind-driven rain and snow, invasive moss and lichen can all undermine the integrity of building materials. Deterioration once started can progress rapidly and the need for a little remedial treatment can soon become a case for major restoration.

Now, however, **Muralplast** with the **M-Guard** range of products offers an effective and long-lasting solution to the protection and preservation of important buildings. Using the latest developments in chemical engineering, **M-Guard** is an impregnating treatment that is totally colourless after application and does not change the appearance nor the composition of the treated surface. It is also UV resistant and does not discolour with age.

Whilst proving water repellent and oil repellent protection for walls, flooring and roofing, it allows the treated surface to remain permeable to air and water vapour, letting the surface breathe. In this way, it resists staining and the build up of dirt from pollution. It also limits the growth of moss and lichen.

Professionally applied, **M-Guard** is so effective that it has a full **10 year guarantee** backed by **AXA Insurance**.

The M-Guard Range

M-Guard Facade

A water-borne, acrylic copolymer-based surface treatment for porous building surfaces such as natural stone, concrete, terracotta, cement and self-locking paving.

M-Guard HD

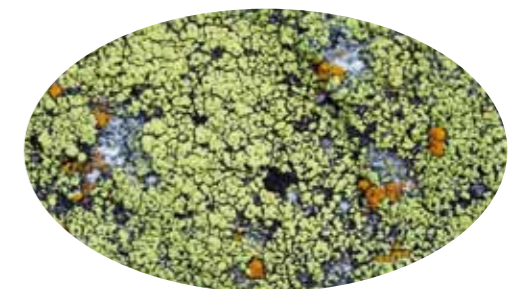

A water-borne, acrylic copolymer-based treatment for low porosity and relatively non-porous building materials including those subject to high use such as pavements, pedestrian precincts, patios, swimming pool decks, stairways and car parking areas.

AntiMoss Guard

A specially-formulated treatment that effectively and safely removes organic growth from surfaces. It also prevents the regrowth sometimes found after traditional treatments by penetrating to the roots of organic growth and moss.

Features and Benefits

- Can be applied to external and internal surfaces
- Prevents penetration by water and oily liquids
- Limits efflorescence formation
- Stain and dirt resistant
- Prevents deterioration by freeze-thaw cycling
- Makes cleaning easier
- Non film-forming, allows the surface to breathe
- Non-hazardous and non-toxic
- Solvent and silicone free
- UV resistant, does not discolour the treated surface
- Non-flammable
- 95%+ biodegradable according to OECD standards

Professional Installation

To ensure that the guarantee is fully maintained and validated, **M-Guard** products are installed by approved applicator **S. Lucas Ltd**. Size-for-size S. Lucas is one of the most efficient companies in the finishing trades and offers a full service in the application of decorative and protective coatings.
